

Premium Quality in every layer

RESIDENTIAL
GARAGE
DOOR

We use the finest quality Canadian galvanized steel finished with primer and exterior polyester paint top coats. The paint acts as a barrier protecting the underlying zinc coating. The finished product delivers unmatched quality and extends the life of your garage door.

To maximize stability and thermal insulation value, each door section is filled with 100% CFC & HCFC free polyurethane foam insulation using a continuous computer controlled process. The result is a door which provides superior strength and energy efficiency. The R value is 12.60.

HARDWARE

We design and manufacture our hardware components to ensure optimum strength, durability and smooth operation of the complete door system.

When purchasing your door, we encourage you to consult your local Steel-Craft dealer on available hardware upgrades and a maintenance schedule that will extend the life of your Steel-Craft door. The Steel-Craft dealer network is available on our website @ www.steel-craft.ca.

WARRANTY

A multi-level Limited Warranty starting with fifteen years against rust due to the paint finish cracking, splitting or peeling. A seven year warranty against delamination of the polyurethane foam from the steel skin of the garage panel. A one year warranty against defects in material or workmanship on hardware and parts supplied.

INSULATION

Polyurethane is our choice of insulation because it boasts important advantages over polystyrene. Its high density composition delivers higher R-value per inch of thickness. Polyurethane offers greater resistance to moisture reducing the risk of mold or mildew. It also possesses dimensional stability and will not soften or melt, remaining strong even at elevated temperatures.

DOOR WIDTHS

8' 9' 10' 12' 16' 18'

The Flush comes in standard heights of 8' through 10', with the standard headroom requirement of 12", however low headroom kits are available for special applications. For 18 foot wide doors, the maximum height is 8 feet.
